

Fund Objectives

The primary objective of the Archway Investment Fixed Income Fund (the Fund) is to provide students in Bryant University's Fixed Income Portfolio Management course with a hands-on learning experience. The Fund launched on October 27, 2017 with \$500,000.

Investment Strategy

The Fund seeks returns, including both income and price appreciation, in excess of its Benchmark, while maintaining a volatility less than 120% of that of its Benchmark. The Benchmark is the Fixed Income ETF GVI, which tracks the Bloomberg Barclays Intermediate Government Credit Index. That index consists of fixed rate debt securities issued by the United States Treasury, U.S. Government Agencies, plus corporate bonds and other taxable bonds that are rated investment grade, denominated in USD, and traded in the US capital market. The index includes debt securities with maturities between 1 and 10 years. The Benchmark was chosen due to its relatively modest volatility, its wide diversification, and its common usage as a benchmark for both active and passive intermediate term fixed income portfolios. It is expected that the tracking error of the portfolio versus this benchmark, defined as the annualized standard deviation of excess returns, will be kept below 2%.

Performance Commentary

The Archway Fixed Income Portfolio returned 0.36% during March, while the benchmark returned 0.38%. The bond market traded sideways through the 21st of March. The Federal Reserve announced a 25 bps hike in the Federal Funds rate, and the updated "dot plots" indicated that the majority of the FOMC favored at least two additional tightenings in 2018. An equity market correction led to flows into US Treasuries and a rally in the bond market during the last week of the month. The yield curve resumed its flattening trend in March, and credit spreads widened modestly. The portfolio was approximately 0.25 years short in duration compared to the index. This cost the portfolio 2 bps in March, while the yield curve exposure cost an additional 2 bps. We eliminated our overweight exposure in High Yield, and shortened the spread duration within the Investment Grade Corporate allocation in early March. This insulated us against the increase in credit spreads. Security selection contributed positive alpha to our portfolio during the month. We continued to reduce our weightings in US Treasury ETFs, and added four individual Treasuries and one Agency bond during the month. This was consistent with our goal to reduce fees and boost the portfolio yield above the index. For the Spring semester thus far, the portfolio has returned -0.97%, while the benchmark returned -1.02%. Since the inception of the fund on October 27, 2017, the fund has returned -1.16% and outperformed the benchmark by 0.12%.
