

### Fund Objective

The primary objective of the Archway Investment Fixed Income Fund (the Fund) is to provide students in Bryant University's Fixed Income Portfolio Management course with a hands-on learning experience. The Fund launched on October 27, 2017 with \$500,000.

### Investment Strategy

The Fund seeks returns, including both income and price appreciation, in excess of its Benchmark, while maintaining a volatility less than 120% of that of its Benchmark. The Benchmark is the Fixed Income ETF GVI, which tracks the Bloomberg Barclays Intermediate Government Credit Index. That index consists of fixed rate debt securities issued by the United States Treasury, U.S. Government Agencies, plus corporate bonds and other taxable bonds that are rated investment grade, denominated in USD, and traded in the US capital market. The index includes debt securities with maturities between 1 and 10 years. The Benchmark was chosen due to its relatively modest volatility, its wide diversification, and its common usage as a benchmark for both active and passive intermediate term fixed income portfolios. It is expected that the tracking error of the portfolio versus this benchmark, defined as the annualized standard deviation of excess returns, will be kept below 2%.

### Performance Commentary

The Archway Fixed Income Portfolio returned -0.07% during June, while the benchmark returned 0.03%. The bond market sold off in the beginning of the month, and then recovered most of those losses over the final 3 weeks of the month. The yield on the 10 year Treasury was unchanged for the month, while the 2 year Treasury yield increased by 10 bps. US economic data releases were consistent with continued solid growth, and the widely anticipated decision by the Federal Reserve to increase the target for the Fed Funds rate pushed the front end of the Treasury curve higher. However, the imposition of tariffs by the U.S. and the responses by its trading partners put a chill into future growth expectations, and this kept longer term Treasury rates from rising. The duration of the portfolio was approximately 0.35 years below that of the index throughout the month, and this added 2 basis points in alpha. The flatter curve subtracted 2 bps in alpha, as the distribution of duration exposures along the yield curve implied a slight bias toward a steeper curve. Our spread duration is lower than the index in corporate credit, and this added 1 bp of alpha during the month. Security selection subtracted 12 basis points of alpha during the month, all of which occurred in the last 3 trading days of the month as GVI, the ETF that we use as a benchmark for the fund, outperformed what its factor exposures predicted. For the Year to Date period, the portfolio returned -1.02%, while the benchmark returned -0.99%. Since the inception of the fund on October 27, 2017, the portfolio returned -1.20% and outperformed the benchmark by 0.03%.

### Cumulative Return Since Inception

#### Investment Performance

#### Portfolio and Benchmark Characteristics

Historical Returns through 6/30/2018	Portfolio	Benchmark	Excess	Portfolio and Benchmark Characteristics	
				Portfolio	Benchmark
Since Inception Return (Cumulative since October 27, 2017)	-1.20%	-1.24%	0.03%	Option Adjusted Duration	3.51 / 3.89
