

Portfolio Description

The primary objective of the Archway Investment Equity Portfolio (the Portfolio) is to provide students in Bryant University's Equity Portfolio Management course with a hands-on learning experience. Student portfolio managers are organized into teams responsible for managing the holdings in their assigned sectors. The Portfolio launched in August 2005 with \$200,000.00. Including subsequent inflows and outflows the net capital contributed has been \$450,000.00, and the cumulative investment return is \$920,435.82.

Investment Strategy

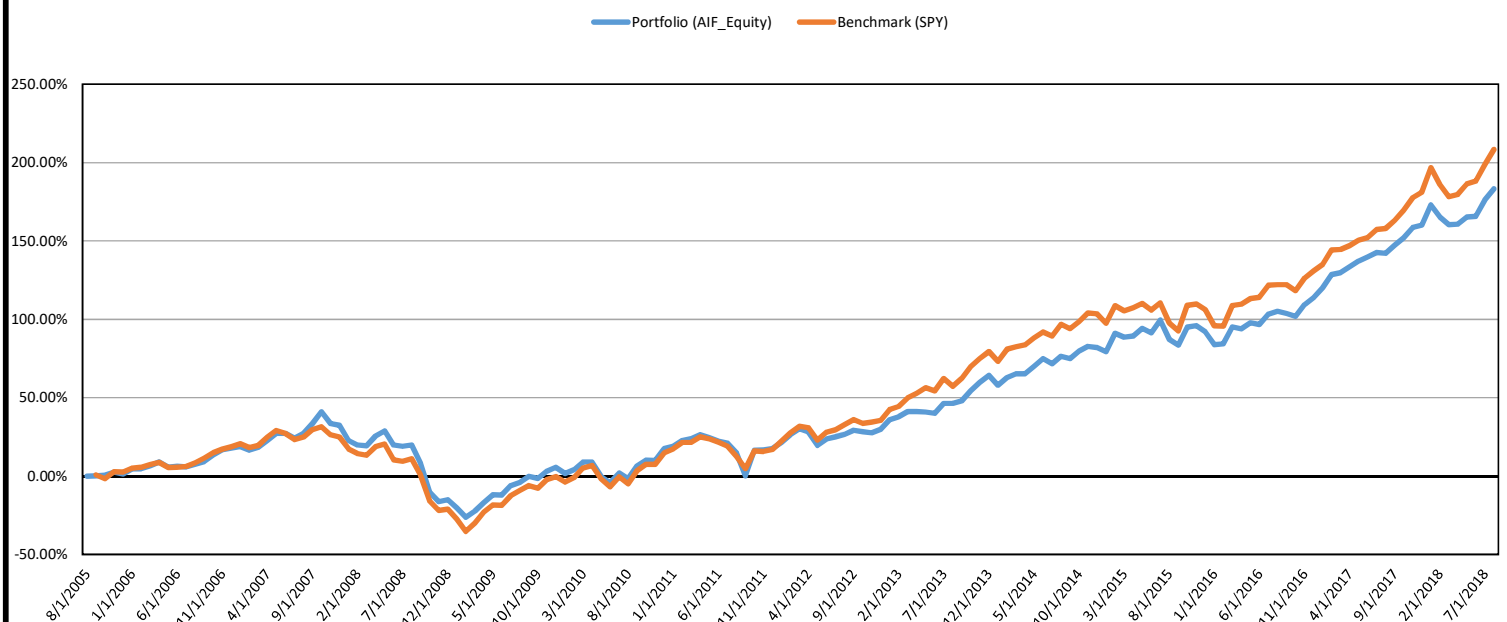

The Portfolio strategy is to purchase stocks for less than their intrinsic value based on both value and growth considerations to achieve risk adjusted returns that equal or exceed benchmark returns. The overall benchmark used for performance evaluation is the State Street SPDR S&P500 Exchange Traded Fund (SPY), while benchmarks used for individual sectors are the corresponding SPDR sector ETFs. Each sector is initially weighted in the portfolio based on their weighting in the S&P500 Index and are then adjusted to reflect portfolio manager expectations about the performance of each sector. While the purchase of foreign equities is allowed, the Fund remains heavily weighted in domestic assets. At times, the Fund uses options as a method to control risk. Option use is limited to covered call and protective put strategies. Options are used only to control risk and the underlying security must be held in the Fund.

The inclusion of ESG factors into the stock selection process has been a recent enhancement. Both portfolio managers and security analysts utilize ESG metrics to identify risk factors and aid in generating excess returns after adjusting for risk.

Performance Commentary

The Archway Equity Portfolio returned 2.52% for the month of August, while the benchmark returned 3.19%. US economic data releases showed continued strong growth and robust corporate profit growth. Weakness in a number of Emerging Market countries led to significant capital outflows from funds focused on EM debt and equity. US markets benefitted from this flight to quality, which reinforced the positive fundamental backdrop to the US equity markets. The sectors within the portfolio with the highest returns in August were Utilities (+7.95%), Information Technology (+6.46%), and Healthcare (+4.75%), while Energy (-2.00%), Materials (-1.95%), and Financials (-0.33%) produced negative returns. Sector Allocation contributed -0.31% of alpha, while Security Selection contributed -0.27% of alpha during the month. Positive security selection alpha contributions came from Telecommunication Services (+0.10%), Energy (+0.06%), and Healthcare (+0.05%), while the portfolio experienced negative security selection alpha contributions from Consumer Discretionary (-0.19%) and Financials (-0.23%). For the summer months, the portfolio has returned 6.75% while the benchmark returned 7.64%. Since the inception of the fund in August 2005, the portfolio has an annualized return of 8.34% and the benchmark has an annualized return of 9.05%.
