

### Fund Objective

The primary objective of the Archway Investment Fixed Income Fund (the Fund) is to provide students in Bryant University's Fixed Income Portfolio Management course with a hands-on learning experience. The Fund launched on October 27, 2017 with \$500,000.

### Investment Strategy

The Fund seeks returns, including both income and price appreciation, in excess of its Benchmark, while maintaining a volatility less than 120% of that of its Benchmark. The Benchmark is the Fixed Income ETF GVI, which tracks the Bloomberg Barclays Intermediate Government Credit Index. That index consists of fixed rate debt securities issued by the United States Treasury, U.S. Government Agencies, plus corporate bonds and other taxable bonds that are rated investment grade, denominated in USD, and traded in the US capital market. The index includes debt securities with maturities between 1 and 10 years. This index was chosen due to its relatively modest volatility, its wide diversification, and its common usage as a benchmark for both active and passive intermediate term fixed income portfolios. It is expected that the tracking error of the portfolio versus this benchmark, defined as the annualized standard deviation of excess returns, will be kept below 2%.

### Performance Commentary

The Archway Fixed Income Portfolio returned 1.00% during June, while the benchmark returned 0.94%. Economic data releases during the month reinforced the view that economic growth was slowing and inflation was trending down. Treasury yields continued their move lower in June, with the 10 year briefly breaching the 2% level, before finally settling at 2.01%. Jerome Powell and other Federal Reserve officials strongly hinted that they are prepared to cut rates to combat the slowdown in growth and the decline in the inflation figures. The Eurodollar curve and the Fed Funds futures markets are now pricing in 50 to 75 bps of cuts through year end, starting in July. The Treasury curve is now inverted from 3 months through 5 years in anticipation of looser monetary policy. Mario Draghi (ECB) and Haruhiko Kuroda (Bank of Japan) also made dovish comments and indicated that their respective central banks would do what was necessary to stem low inflation and declining rates of growth. As a result, we saw a decline in sovereign yield curves across the globe. In the face of lower sovereign yields, corporate bonds saw a bid in June and spreads tightened in the investment grade and high yield corporate sectors. Agency debt and MBS both saw slightly wider spreads, in part due to comments made by various government officials about a future privatization of Fannie Mae and Freddie Mac. At the end of the Spring term, the portfolio's interest rate duration, curve exposures, and spread duration were brought close to those of its benchmark to reduce tracking error while the students were away during the summer. As a result, these factor exposures contributed little to the excess return of the fund in June. Income and security selection contributed 0.06% in alpha to the portfolio during the month, which was equal to the total alpha for the month. For the 2019 calendar year, the portfolio has returned 5.08%, while the benchmark returned 4.78%. Since its inception in October 2017, the portfolio has an annualized return of 3.27% and outperformed the benchmark by 0.13%.

Cumulative Return Since Inception

### Investment Performance

### Portfolio and Benchmark Characteristics
