

Fund Objective

The primary objective of the Archway Investment Fixed Income Fund (the Fund) is to provide students in Bryant University's Fixed Income Portfolio Management course with a hands-on learning experience. The Fund launched on October 27, 2017 with \$500,000.

Investment Strategy

The Fund seeks returns, including both income and price appreciation, in excess of its Benchmark, while maintaining a volatility less than 120% of that of its Benchmark. The Benchmark is the Fixed Income ETF GVI, which tracks the Bloomberg Barclays Intermediate Government Credit Index. That index consists of fixed rate debt securities issued by the United States Treasury, U.S. Government Agencies, plus corporate bonds and other taxable bonds that are rated investment grade, denominated in USD, and traded in the US capital market. The index includes debt securities with maturities between 1 and 10 years. This index was chosen due to its relatively modest volatility, its wide diversification, and its common usage as a benchmark for both active and passive intermediate term fixed income portfolios. It is expected that the tracking error of the portfolio versus this benchmark, defined as the annualized standard deviation of excess returns, will be kept below 2%.

Performance Commentary

The Archway Fixed Income Portfolio returned -0.87% during March, while the benchmark returned -0.54%. Covid-19 continued to spread at a rapid rate, hitting New York extremely hard with the number of cases exceeding China. The Fed cut its Fed Funds target to 0%-0.25% in two emergency moves. Congress and the President passed a \$2.1 trillion stimulus package that provided one-time stimulus checks for individuals and dependents, and provided direct aid to municipalities and states. It also provided \$221 billion in tax breaks and direct aid to hospitals, and \$350 billion to small businesses. Unemployment claims skyrocketed in the second half of the month as the government shut down all non-essential business. A massive flight to quality trade emerged during month with everything except the most liquid Treasury securities subject to panic selling. This was finally halted when the Fed and other central banks began massive asset purchase programs covering Treasuries, MBS, corporate bonds and commercial paper. Our portfolio benefited from being slightly long duration (+ 3bps in excess return), but with the portfolio positioned for curve flattening, we lost 8 bps from curve exposure. Our portfolio has more exposure to investment grade credit and high yield credit than its benchmark. Credit spreads widened as the Covid-19 situation worsened. They ended significantly higher for the month, despite the Fed induced rally in credit in the final week of March. Our sector spread exposures relative to the benchmark contributed -0.55% of excess return last month. We did have positive income and security selection alpha, which added 0.26% in excess return for the month. For the term thus far, the portfolio returned 1.82%, while the benchmark returned 2.19%. Since its inception in October 2017, the portfolio has an annualized return of 3.77%, which lagged the benchmark by 1 bp.
