The Archway Investment Fund - Fixed Income Portfolio Bryant University

Monthly Report Data as of 7/31/2021

Fund Objective

The primary objective of the Archway Investment Fixed Income Fund (the Fund) is to provide students in Bryant University's Fixed Income Portfolio Management course with a hands-on learning experience. The Fund launched on October 27, 2017 with \$500,000.

Investment Strategy

The Fund seeks returns, including both income and price appreciation, in excess of its Benchmark, while maintaining a volatility less than 120% of that of its Benchmark. The Benchmark is the Fixed Income ETF GVI, which tracks the Bloomberg Barclays Intermediate Government Credit Index. That index consists of fixed rate debt securities issued by the United States Treasury, U.S. Government Agencies, plus corporate bonds and other taxable bonds that are rated investment grade, denominated in USD, and traded in the US capital market. The index includes debt securities with maturities between 1 and 10 years. This index was chosen due to its relatively modest volatility, its wide diversification, and its common usage as a benchmark for both active and passive intermediate term fixed income portfolios. It is expected that the tracking error of the portfolio versus this benchmark, defined as the annualized standard deviation of excess returns, will be kept below 2%

Performance Commentary

The Archway Fixed Income Portfolio returned 0.48% during July, while the benchmark returned 0.74%. The US economy continued to recover in August, but the pace of gains decelerated. Employment grew at a solid pace, but fell short of market expectations. Initial claims have stopped declining and ticked higher in July. Concerns about the spread of the delta variant of COVID-19 across the globe, coupled with economic and regulatory concerns emanating from China, had many fixed income investors seeking to risk in July. This induced a rally in the US Treasury market. The fact that the Treasuries continued to stage a flattening rally despite high reported inflation figures clearly indicates that a large number of investors want the safety and liquidity of Treasuries despite their negative real rates. The Federal Reserve is reinforcing this by keeping monetary policy extremely loose. After their July meeting, Fed Chairman Powell reiterated that policy rates will remain at the 0% to 0.25% range for an extended period of time, and that conditions necessary for beginning to reduce the size of asset purchases have not been met. However, that latter point is not shred by all members of the FOMC and a few members have publicly stated that curtailing the size of asset purchases should begin now. This is something to watch closely in the coming months. The portfolio entered the month with a duration 0.3 year shorter than the benchmark, and when the 10 year yield dipped below 1.25% a trigger set by the student PMs prior to the summer break, the duration underweight was extended to 0.5 years. The underweight is concentrated in the 5 to 10 year portion of the curve. Those duration and curve exposures contributed -0.04% and -0.03% in alpha for the month. The portfolio remains slightly overweight in investment grade corporate bonds, overweight in MBS, overweight in agency bonds, and overweight in high yield loans. These allocation decisions collectively contributed -0.01% to alpha during the month. Finally, income and security selection contributed -0.18% in alpha to the portfolio during the month. For the year thus far, the portfolio has returned -0.16%, while the benchmark returned -0.37%. Since its inception in October 2017, the portfolio has an annualized return of 3.58% and outperformed the benchmark bv 0.16%.
